Power Washing

SGS Power Washing vs Pressure Washing

Power washing is a high-pressure stream of very hot water that blasts away dirt and materials from outdoor surfaces. The combination of high pressure and the temperature of the water make it better at removing common sidewalk issues versus pressure washing.

SGS Power Washing – Customer Expectations

We take pride in making you and your area look great.

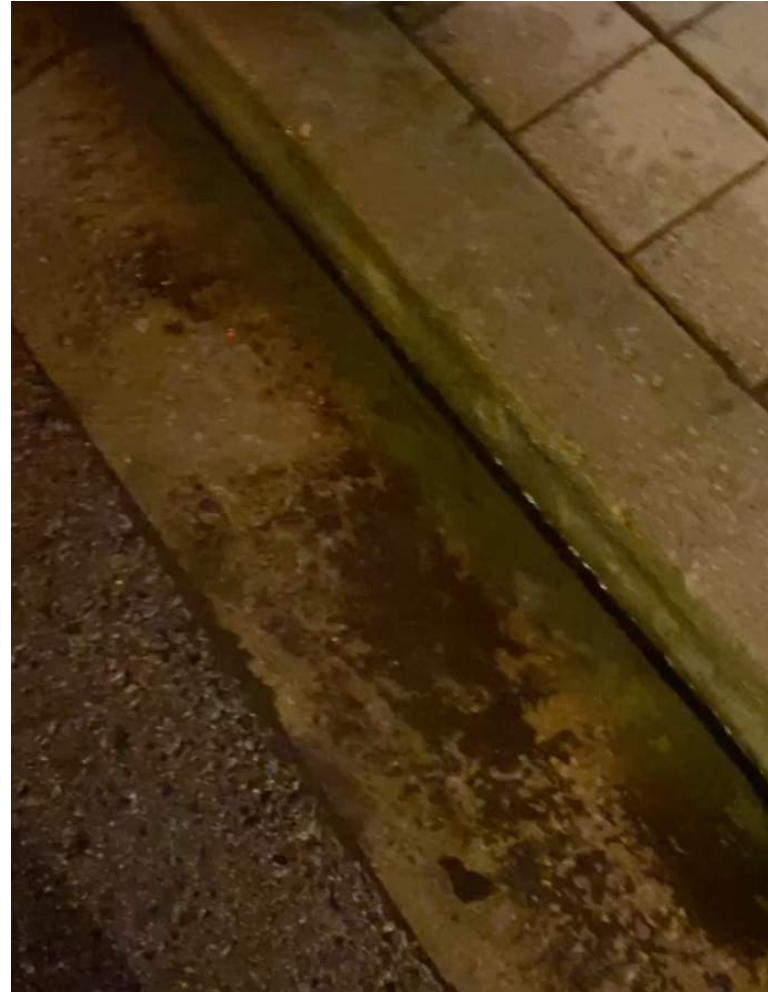

Through SGS' Power Washing Service you can expect:

- Removal of everyday dirt and spills
- Removal of anti-social discharges
- Removal of gum:
 - Gum stains are a natural by-product of their presence on the sidewalk. With regular power washing these stains will be reduced dramatically overtime.
- Reduction in odors related to garbage placed on the curb and other anti-social uses
- Reduction of grease and grease stain accumulation:
 - Grease and similar stains absorb into concrete with determination. However, regular power washing over the stained area will have a positive impact on its appearance

Expect a noticeable and welcoming result.

Grime and Dirt Removal

Dirt and grime build up are often not realized until they are exposed.

We're ready to clear them from your sidewalk and dispose of them accordingly.
